# Clearfix

[View on GitHub](#)

Quickly and easily clear floated content within a container by adding a clearfix utility.

Your database should match the speed and scale of your vision. Evolve your database with PlanetScale.  
ads via Carbon

Easily clear floats by adding **.clearfix** to the parent element. Can also be used as a mixin.

Use in HTML:

```
<div class="clearfix">...</div>
```

Copy

The mixin source code:

```
@mixin clearfix() {
  &::after {
    display: block;
    clear: both;
    content: "";
  }
}
```

Copy

Use the mixin in SCSS:

```
.element {
  @include clearfix;
}
```

Copy

The following example shows how the clearfix can be used. Without the clearfix the wrapping div would not span around the buttons which would cause a broken layout.

Example Button floated left

Example Button floated right

```
<div class="bg-info clearfix">
  <button type="button" class="btn btn-secondary float-start">Example Button floated left</button>
  <button type="button" class="btn btn-secondary float-end">Example Button floated right</button>
</div>
```

Copy
