Visibility

[View on GitHub](#)

Control the visibility of elements, without modifying their display, with visibility utilities.

The MySQL-compatible serverless database platform. Time to evolve your database with PlanetScale.

ads via Carbon

Set the **visibility** of elements with our visibility utilities. These utility classes do not modify the **display** value at all and do not affect layout – **.invisible** elements still take up space in the page.

Elements with the **.invisible** class will be hidden *both* visually and for assistive technology/screen reader users.

Apply **.visible** or **.invisible** as needed.

```
<div class="visible">...</div>
<div class="invisible">...</div>
```

Copy

```
// Class
.visible {
  visibility: visible !important;
}
.invisible {
  visibility: hidden !important;
}
```

Copy

Sass

Utilities API

Visibility utilities are declared in our utilities API in `scss/_utilities.scss`. [Learn how to use the utilities API.](#)

```
"visibility": (
  property: visibility,
  class: null,
  values: (
    visible: visible,
    invisible: hidden,
  )
)
```

Copy

B Bootstrap

Designed and built with all the love in the world by the Bootstrap team with the help of our contributors.

Code licensed MIT, docs CC BY 3.0.

Currently v5.0.2.
